Chapter 1

Electricity

1.1 Light a Bulb

You turned on the Light many times. You just throw the switch, and the light goes on.

1.1.1 Why does the bulb light up?

Because Electricity goes through a tiny wire inside the glass. That makes the wire so hot that it starts to glow. That glow is what we see.

1.1.2 What is Electricity?

You can think that electricity is like water in a hose or a tube. You have to imagine the hose full of water for this to work. You can pour in more water on one side, and about the same amount of Water will come out on the other side.

<table>
<thead>
<tr>
<th>Electricity</th>
<th>Flow of Water</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electron</td>
<td>A piece of Water</td>
</tr>
<tr>
<td>Wire</td>
<td>Hose</td>
</tr>
<tr>
<td>Battery</td>
<td>Pump</td>
</tr>
<tr>
<td>Solar Panel</td>
<td>Pump</td>
</tr>
<tr>
<td>Light bulb</td>
<td>Turbine</td>
</tr>
<tr>
<td>Circuit</td>
<td>All the Pump’s, turbines, hoses, pipes together</td>
</tr>
</tbody>
</table>

Electricity is kind of weird though. It never really “leaks out” onto the grass like a garden hose can. It always has to stay in a hose. If the hose ends, the electrons can’t go out.

So, a Wire is like a hose. The light bulb has a tiny hose inside, too.
1.1.3 Why does it move?

Electricity stays always in the hose. So, why would it ever move and make the light go on?

It does that because there’s a “pump” somewhere. A Battery is a “pump” for electricity. A power plant is a “pump” for electricity. A Solar Panel is a “pump” for electricity. We call them “Sources of electricity”.

So, a battery always tries to push electricity through the wire. When one wire is connected to one side of the light bulb, and the other wire is connected to the other side, the battery can push the electricity through the light bulb and make it light up.

When the wires are not connected right, the light bulb won’t light up.

1.1.4 A switch

Now we saw that in a broken circuit, the electrons cannot light the bulb.

That’s great news if we want to turn the light off! We just have to cut the cable somewhere, that will turn the light off. Now, you don’t want to walk around with a wire cutter to turn off the light, so we put a Cutting machine in the circuit. Like so:

That can turn the lights off.

1.1.5 A motor

A motor turns one way when electricity comes through one way, and the other way when it comes the other way. We’ll build one sometime later.
Chapter 2
Programming

2.1 Tell the computer what to do

When you are programming, all you do is to tell the computer what to do.

Example: Dear Computer, please Write “Hello” on the screen. Then, write all the numbers from 0 to 10, each on their own line.

The Computer is really lazy, but also always does what you tell it to do. If you don’t tell it to do something, it won’t do it. If you are not really precise in telling it what to do, it will do something different from what you are expecting.

When you tell people to do something, you expect them to think. Like this:

- Close the Door! (Of course Only if it’s open.)
- Wash the dishes! (The dirty ones of course, not the clean ones.)
- Vacuum! (The carpet, not the ceiling!)

If you don’t tell the computer exactly what needs to be done, it will get confused, do the wrong thing, do nothing at all, or complain.

2.2 Computer Languages

Computer Languages are the only thing the Computer understands. They are made so that the computer can not “find excuses” to do something else from what you are telling it to do. They are Simple.

In a computer language

every Idea
or command
is on its own line.

Kind of like a shopping list. That makes it easier for you to understand. The computer does not really care.

There are many computer languages. They are all a bit different from each other, but not too much.
2.3 Python

Python is a computer language.

- `print "hello";`
  - will write hello to the screen.
- `x = read;`
  - will read what you type in.
- What will this do?
- `print "What's your name"; x = read; print "Hello ", x;`
Chapter 3

Lessons

3.1 Electricity

Explain Electricity. Use Water equivalence.

3.1.1 Lesson

- Electricity always goes around in a circle. If there is an interruption somewhere, it does not go past.
- Explain Switches and electric "switching machines" like relays and transistors
- Sources: Explain danger of AC. Explain Batteries (water balloon) example. Explain what not to do, to keep batteries from exploding.
- Loads: Motors, coils (for relay), lights, and LED's. Note that direction of current makes a difference for LED's and Motors. Explain when and why things blow up.

3.1.2 Lab

- Do simple tasks, create circuit with wires, batteries, switches and loads. Encounter practical problems. Repeat.
- "Put a battery, a motor, a light bulb and 2 switches together so that you can turn everything off, or either the bulb or the motor on."
- "Use a switch to make the motor go backwards and forwards."
3.2 Programming

3.2.1 Lesson

- Pick simple language (which one? Logo? Basic?)
- Explain how computer does things (follow instructions).
- Have 1 Child be computer and one instructor, move ball from a to b.
- Show debugger of hello world (step trough).
- Maybe introduce loops

3.2.2 Lab

- Start Computers, write Hello World.
- Write small program that counts to 10 with loop
- Use debugger (?)

3.3 Put it together

3.3.1 Lesson

- Introduce new command that controls Hardware.
- Repeat lesson 1
- Repeat lesson 2
- Show example (debugger, lamp)

3.3.2 Lab

- Make lights blink with program.
- Make wheels turn with program.

3.4 Voltage and Current

3.4.1 Lesson

- What is a Voltage?
- What is a Current?
- What’s analog/digital (on/off vs a little on or more on than off)
- How to measure Voltages and Currents
3.4.2 Lab

- Read back signals (analog and digital) and measurements into computer. Show them on screen.
- Measure Battery Voltages. Compare on screen. Add loads. ??!
- Change outputs and read them back.

3.5 Resistors and Ohm’s law

3.5.1 Lesson

- Why does the Voltage go down when the Motor runs?
- How to measure Resistance.
- U/R=I and derivatives.
- Resistors and Potentiometers

3.5.2 Lab

- Measure Potentiometers.
- Maybe: Use Pot to change Angle of a Motor. (first real Robotics thing).

3.6 Take things apart and wire them up

3.6.1 Lesson

- Review how to measure things, etc.
- How to cut cables without getting hurt.
- Measuring things that are not supposed to be measured.

3.6.2 Lab

- Take apart toy, measure internal voltages when it’s working.
- Disconnect Wire and remote control from computer.
Appendix A

GNU Free Documentation License

Version 1.1, March 2000

Copyright © 2000 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The purpose of this License is to make a manual, textbook, or other written document “free” in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondary, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of “copyleft”, which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.
A.1 Applicability and Definitions

This License applies to any manual or other work that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. The “Document”, below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as “you”.

A “Modified Version” of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A “Secondary Section” is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document’s overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (For example, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The “Invariant Sections” are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License.

The “Cover Texts” are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License.

A “Transparent” copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, whose contents can be viewed and edited directly and straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup has been designed to thwart or discourage subsequent modification by readers is not Transparent. A copy that is not “Transparent” is called “Opaque”.

Examples of suitable formats for Transparent copies include plain ASCII without markup, TeXinfo input format, LATEX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML designed for human modification. Opaque formats include PostScript, PDF, proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML produced by some word processors for output purposes only.

The “Title Page” means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, “Title Page” means the text near the most prominent appearance of the work’s title, preceding the beginning of the body of the text.
A.2 Verbatim Copying

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

A.3 Copying in Quantity

If you publish printed copies of the Document numbering more than 100, and the Document’s license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a publicly-accessible computer-network location containing a complete Transparent copy of the Document, free of added material, which the general network-using public has access to download anonymously at no charge using public-standard network protocols. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.
A.4 Modifications

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.

- List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has less than five).

- State on the Title page the name of the publisher of the Modified Version, as the publisher.

- Preserve all the copyright notices of the Document.

- Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.

- Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.

- Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.

- Include an unaltered copy of this License.

- Preserve the section entitled “History”, and its title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section entitled “History” in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.

- Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the “History” section. You may omit a network
location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.

- In any section entitled “Acknowledgements” or “Dedications”, preserve the section’s title, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.

- Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.

- Delete any section entitled “Endorsements”. Such a section may not be included in the Modified Version.

- Do not retitle any existing section as “Endorsements” or to conflict in title with any Invariant Section.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version’s license notice. These titles must be distinct from any other section titles.

You may add a section entitled “Endorsements”, provided it contains nothing but endorsements of your Modified Version by various parties – for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

A.5 Combining Documents

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the
original documents, unmodified, and list them all as Invariant Sections of your
combined work in its license notice.

The combined work need only contain one copy of this License, and multiple
identical Invariant Sections may be replaced with a single copy. If there are
multiple Invariant Sections with the same name but different contents, make
the title of each such section unique by adding at the end of it, in parentheses,
the name of the original author or publisher of that section if known, or else a
unique number. Make the same adjustment to the section titles in the list of
Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections entitled “History” in
the various original documents, forming one section entitled “History”; likewise
combine any sections entitled “Acknowledgements”, and any sections entitled
“Dedications”. You must delete all sections entitled “Endorsements.”

A.6 Collections of Documents

You may make a collection consisting of the Document and other documents
released under this License, and replace the individual copies of this License
in the various documents with a single copy that is included in the collection,
provided that you follow the rules of this License for verbatim copying of each
of the documents in all other respects.

You may extract a single document from such a collection, and distribute it
individually under this License, provided you insert a copy of this License into
the extracted document, and follow this License in all other respects regarding
verbatim copying of that document.

A.7 Aggregation With Independent Works

A compilation of the Document or its derivatives with other separate and in-
dependent documents or works, in or on a volume of a storage or distribution
medium, does not as a whole count as a Modified Version of the Document,
provided no compilation copyright is claimed for the compilation. Such a comp-
ilation is called an “aggregate”, and this License does not apply to the other
self-contained works thus compiled with the Document, on account of their be-
ing thus compiled, if they are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the
Document, then if the Document is less than one quarter of the entire aggregate,
the Document’s Cover Texts may be placed on covers that surround only the
Document within the aggregate. Otherwise they must appear on covers around
the whole aggregate.
A.8 Translation

Translation is considered a kind of modification, so you may distribute transla-
tions of the Document under the terms of section 4. Replacing Invariant Sections
with translations requires special permission from their copyright holders, but
you may include translations of some or all Invariant Sections in addition to
the original versions of these Invariant Sections. You may include a translation
of this License provided that you also include the original English version of
this License. In case of a disagreement between the translation and the original
English version of this License, the original English version will prevail.

A.9 Termination

You may not copy, modify, sublicense, or distribute the Document except as
expressly provided for under this License. Any other attempt to copy, modify,
sublicense or distribute the Document is void, and will automatically terminate
your rights under this License. However, parties who have received copies, or
rights, from you under this License will not have their licenses terminated so
long as such parties remain in full compliance.

A.10 Future Revisions of This License

The Free Software Foundation may publish new, revised versions of the GNU
Free Documentation License from time to time. Such new versions will be
similar in spirit to the present version, but may differ in detail to address new
problems or concerns. See http://www.gnu.org/copyleft/.

Each version of the License is given a distinguishing version number. If
the Document specifies that a particular numbered version of this License "or
any later version" applies to it, you have the option of following the terms and
conditions either of that specified version or of any later version that has been
published (not as a draft) by the Free Software Foundation. If the Document
does not specify a version number of this License, you may choose any version
ever published (not as a draft) by the Free Software Foundation.

ADDENDUM: How to use this License for your
documents

To use this License in a document you have written, include a copy of the License
in the document and put the following copyright and license notices just after
the title page:

Copyright © YEAR YOUR NAME. Permission is granted to copy,
distribute and/or modify this document under the terms of the GNU
APPENDIX A. GNU FREE DOCUMENTATION LICENSE

Free Documentation License, Version 1.1 or any later version published by the Free Software Foundation; with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST. A copy of the license is included in the section entitled “GNU Free Documentation License”.

If you have no Invariant Sections, write “with no Invariant Sections” instead of saying which ones are invariant. If you have no Front-Cover Texts, write “no Front-Cover Texts” instead of “Front-Cover Texts being LIST”; likewise for Back-Cover Texts.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
